# Visualizer

Product Description

Visualizer is an advanced data warehouse solution that allows IT managers to graphically analyze security related system activity quickly and easily.

Visualizer uses Business Intelligence techniques to process large quantities of transaction data with minimal storage requirements. This process eliminates the need for time-consuming log scanning and tracking activities that tie up system resources and increase IT operating costs.

With most security analysis products, the system administrator faces a "needle in a haystack" search task in order to analyze security breaches or other critical system activity. Visualizer makes the whole process painless, simple and cost-effective!

Visualizer presents the user with a user-friendly, Java-based GUI, making the whole analysis process a snap, even for technologically challenged users. The user simply points, clicks and drags the appropriate parameters to the filter section of the GUI and a stunning pie chart appears in seconds that tells the whole story. Want to tweak the analysis a bit? Simply mouse a few changes and the revised results appear instantaneously.

Visualizer

Key Features and Benefits

- User-friendly and intuitive JAVA-based GUI running on Windows XP

- Lightning fast operation does not waste precious system resources

- Report generator creates statistical reports with rich graphics

- Automatically associates all significant data elements with each transaction type

- Easily filter data to "drill down" into log files, set up multiple filter scenarios

- Queries may be saved and reused as necessary

- Operates in conjunction with Firewall and Audit and supports multiple computer input files for crosschecking security data

- Excel data export option.

Visualizer's Added Value

- Extract the information you need for cross-correlation data analysis and comparison

- Easily create and manage data entries within your organization worldwide

- Extract the data which fits your specific needs

- Graphical presentation of all system activities

- 360 degree outlook on system activities.
