View

View: Record and Field-level Security Solution for the iSeries!

View provides top-notch record and field-level security by restricting access to specific fields and records in iSeries **(AS/400)** databases. **View** does not require recompilation of existing user programs. This innovative, patent-pending solution guarantees bulletproof control of your company's private information.

View: The Only One of its Kind

OS/400 security and other third-party solutions provide protection at the object level only. But **View** is unique. It lets systems administrators create rules that define which users are authorized to view or modify the contents of **individual records** or **individual fields** in a database. A user who does not possess the proper credentials, cannot see or modify the data in these records/fields.

View: Is User- Friendly

The easy-to-use, non-technical interface and task-oriented GUI, keep user definition time down to a minimum. **View** lets you set your parameters and get back to work, with no time wasted.

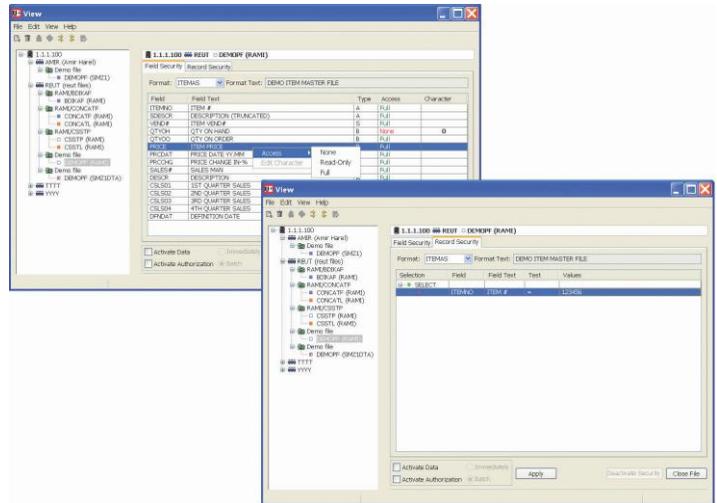

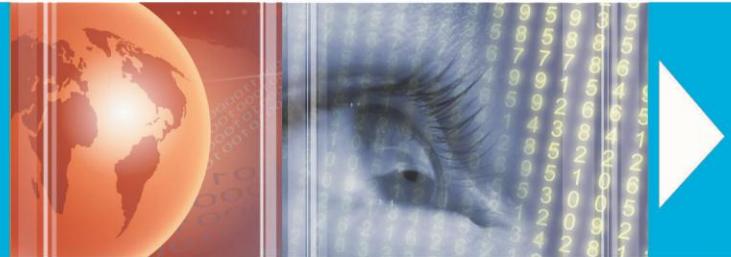

View™ Java GUI

View: Puts You in Control

Why worry about prying eyes? Unauthorized access to sensitive data has serious ramifications, including identity theft, stolen credit records, or email address harvesting.

But not with **View**! With **View**, you control WHO sees WHAT and WHEN.

View

Key Features and Benefits

- Allows administrators to restrict fields and records to selected, specific users

- Works with any type of access method (FTP, SQL, DDM, ODBC, etc.)

- Does not require changes in other software packages

- Display asterisks or similar generic characters for unauthorized users

- Modify user and user-group profiles quickly and easily

- Define file, record and field restrictions in seconds

- Comes with user-friendly, intuitive, GUI

- Designed for ease of use by non-technical personnel

- Color-coded file navigation system

- Lightning fast operation does not waste precious system resources

- Minimal disk space requirements

USING VIEW...

Financial Institutions

- Prevent unauthorized entry or modification of financial transactions

- Ensure client confidentiality

- Ensure compliance with regulations governing financial activity

Health Care Providers

- Guarantee patient privacy

- Ensure compliance with data security and privacy regulations

e-Business

- Ensure client transaction security

- Prevent identity theft and e-mail address harvesting

Industry and Commerce

- Maintain security of confidential data

- Comply with newly enacted regulations for corporate governance
