

Nomad Enterprise™

Revolutionize your software distribution

Nomad Enterprise™ uses spare network bandwidth to reliably and securely deliver large software deployments, operating system upgrades and patches across thousands of PCs, servers and sites reliably and without disruption. Using patented technology to remove the need for branch servers and desk side visits, Nomad makes the most efficient use of available bandwidth while ensuring that other network traffic, like business applications or email, remain unaffected.

“Nomad from 1E is used to extend the capabilities of our strategic desktop management solution. It now handles around 99% of all of our software deployments and patch updates to our 300,000+ desktop and laptop machines.”

Gary M Phillips, Global Head of IT Operations, HSBC

Case Study

Verizon Wireless automated desktop deployments across their entire PC estate using Nomad Enterprise, delivering a cash saving of \$5m and an 80% reduction in deployment times

HSBC use Nomad to manage the deployment of 33 million software distribution packages globally, without the need for costly desktop management servers

Do bandwidth constraints prevent you from managing your systems effectively for fear of disrupting your network?

Do you need to significantly reduce the time and costs involved in your Windows 7 deployment?

Do you want to reduce the number of servers you have in your branch offices?

“This has given us faster and more flexible build and upgrade processes, allowing us a greater degree of control over the corporate desktop of over 1,000 seats. We are anticipating significant cost-savings through better system management and reduced disruption to users.” **John Court, SJ Berwin**

Advantages

- **Reliable, automated software deployments**
Immediately distribute software patches or operating system upgrades to thousands of PCs
- **Massive data transfers, zero disruption**
Nomad is a world class solution that automates software deployments day or night without ever disrupting users
- **Reduce hardware and management costs**
Remove branch servers and eliminate desk side visits by extending zero touch software deployments to every machine
- **Download and install once**
Safe and secure delivery of each and every patch, upgrade and deployment to every machine, every time, guaranteed!
- **Simplify systems administration**
Delivers seamless integration with Microsoft Systems Center Configuration Manager 2007

Customers

Our Nomad Enterprise customers include:

Finance

- ATB Financial
- National City Corporation
- Allstate Insurance
- ING Investment Management
- Grupo Banco Popular

IT & Telecoms

- Verizon Wireless

Government

- State of West Virginia

Manufacturing

- Harsco Corporation
- Hertel
- Nestlé
- Sony Europe

Industrial Services

- Syngenta
- Spectra Energy Services
- Pioneer Natural Resources
- Noble Drilling Services

Healthcare

- Genesis Healthcare

Legal

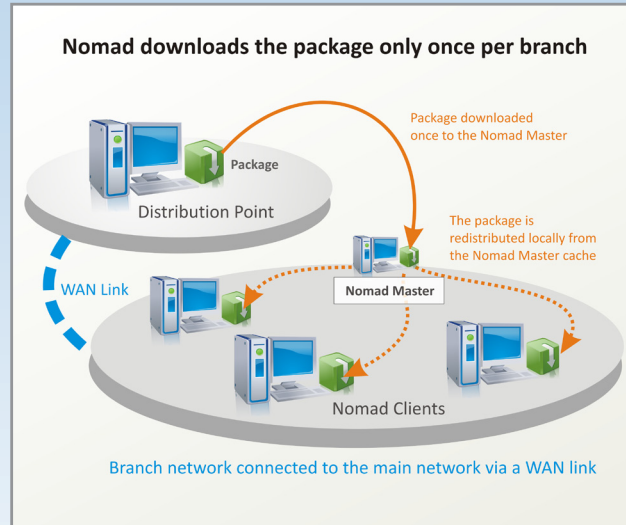

- SJ Berwin

“Though there is still room for improvement, organizations using WAN optimization are succeeding in reducing their network management labor costs and the cost of telecommunication services while improving application performance.”

Bojan Simic, Aberdeen Group, Optimizing WAN for application acceleration

“In the banking environment, it’s vital we keep systems and application software up-to-date to ensure the effectiveness of both operations and security. In situations like this, Nomad provides the toolset that every IT department needs. Andrés Modet , Grupo Banco Popular

Benefits

Significantly reduces costs, delivering zero touch deployment of operating systems and software upgrades across the network without branch servers or site visits

Removes server-class machines from branch offices by enabling you to use available bandwidth more efficiently, reducing hardware, license and staff costs

Optimizes the network for deployments without ever disrupting day-to-day operations or critical traffic like business applications or email

Guarantees reliability without operational overheads by enabling failsafe deployments with enhanced download integrity and auto recovery if a connection goes offline

Simplifies systems management by allowing easy OS migration without the need for branch office server deployments or IT administration visits

Integrates two components, Nomad Branch® which intelligently distributes systems management data once over the WAN and PXE Lite, which provides network booting capabilities without the need for branch servers

Delivers automated Windows 7 deployments, to enable rapid, successful and cost effective operating system upgrades

1E – Empowering Efficient IT

We believe every one of our customers should expect more from their IT. Founded in 1997, 1E pioneered advanced PC power management with the release of ground-breaking solutions like NightWatchman® and WakeUp™. That innovative approach has continued with the development of revolutionary concepts like Useful Work™, Drowsy Server® and Computer Health™ as part of a unique range of industry-leading solutions. Headquartered in London and New York and with nearly 14 million licenses deployed world-wide, over 1100 organizations in 42 countries have trusted us to help them to work effectively, productively and sustainably. To date, we have helped our customers save in excess of \$530m in energy costs alone, cutting CO2 emissions by 4.3 million tons. We have many imitators, but there is only one 1E.
