FileScope

Key Features

Security and SOX related actions

- Determine which users performed certain activities
- Audit pre-defined changes such as:
 - List all changes made for records in which ITEMCLASS = LOAN
 - List all updates to records in which &PRICE ADD 20%
 - List all accesses to records in which &PRICEDATE SET 061031
- Print, e-mail or export a complete audit trail
- Undo any set of changes, or particular change, performed during the last 99 days.

Full-Screen Editor

Access and update **all** content on a multi-record screen. Efficient and saves time, especially as **FileScope** enables the user to work on generically named files.

Field Calculations

FileScope includes a robust set of tools to define internal fields using formulas which can even be based upon external files and functions!

Multiple File Management

Real-time, on-line **Join** capabilities in order to connect to other files. Supports **Joined** fields of different types and length.

Report Generator

Most efficient report generator around, both batch and interactive. Some of **FileScope's** unique capabilities: reports using internal and/or calculated fields, reports using function-derived fields (e.g. external program), support for a range of keys, break level capabilities, transferring results to PC, subsetting data, advanced page formatting and more.

Batch processing facility

Resource intensive activities such as End-of-Day processing can be processed in batch. Repetitive operations can be saved and run directly in batch, without any on-line operator action.

File Scan

FileScope offers a wide range of retrieval methods for locating specific records in a file or a subset of records.

Special Printing

Print an entire file structure, a single record or a group of records in a multi-record screen format. Standard product capabilities such as Sorting, Record Group Definition, Field Reorganization, etc. provide additional printing power.

Log file changes

Log File contains all relevant historical information regarding who created/modified data, thus allowing for easy tracing of every modification. Includes the operations performed arranged by user name, file name and time range.
