

# Hospital Sainte Thérèse Selects Filescope – Case Study

## Customer Testimonial

Customer:

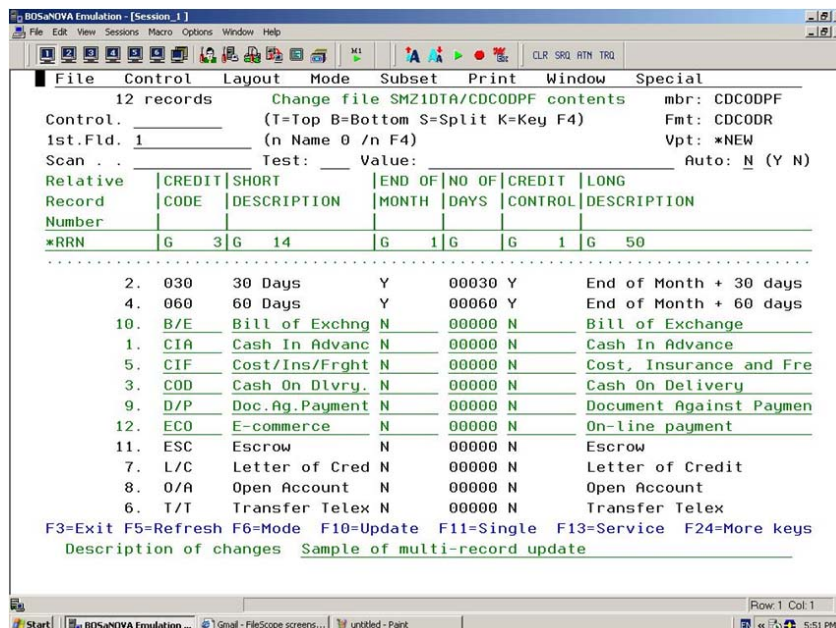

Mr. Didier Brisbois  
Technical manager IT of IFAC  
Hôpital Sainte Thérèse  
Chaussée de Houffalize, 1  
6600 Bastogne

My goal was to find a tool for DB2 databases which would provide me with:

- Full and robust reporting capabilities
- An easy to learn and easy to use product
- The ability to create special-purpose ViewPoints (file-specific pre-defined scripts) which can be used by unsophisticated users
- Batch processing capabilities in order not to tie-up the user's session
- Minimal interference with AS/400 performance

Following is the list of benefits we have achieved using FileScope/Platinum:

- Quick and Easy
- Ability to perform batch processing
- Integration of FileScope into application menus
- Speed of the software, with many more options than Query
- Ability to make mass updates
- Journaling facilities to view temporary changes to a file by any user and also to monitor deleted records. (Note: These monitoring, tracking and reporting capabilities are especially important for companies which need to be HIPAA, SOX, PCI, etc. compliant.)
- Interactively viewing and editing file contents quickly and easily
- Product uses DB2-specific concepts (such as members, logical files, etc.) which is unique among products which support ODBC
- Short learning curve for most user's queries

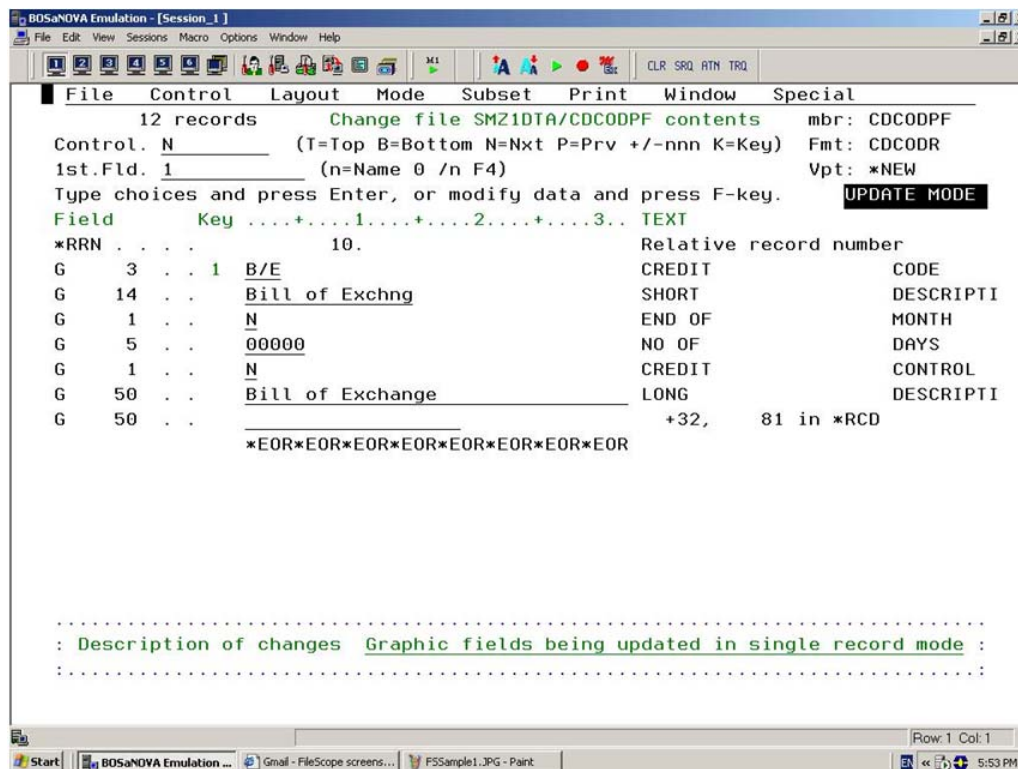

Sample Multi-Record Update Screen

## About FileScope

FileScope is recognized by Power i professionals as the leading Power i product in the area of data manipulation. FileScope provides unprecedented file editing capabilities, while adhering to the highest standards of quality, reliability and performance.

## Features

- Cross-product Unicode UTF-16, UCS-2 support enables viewing SAP, JDE, MOVEX, BPCS, etc. files.
- Single e-mail contains all session changes
- Export to XML-format files
- Security, SOX and PCI support
- Full-Screen editor
- Save file-specific pre-defined scripts
- Field calculations
- Report generator
- Batch processing facility
- Multiple file management
- File scan and subset
- Special printing capabilities
- Log file changes
